

Customer Testimonial: ECO LIFT (#2420)

I just wanted to write you a letter regarding your excellent product Eco Lift. As you know, we have been using this product for several years now, and it makes a huge difference in our lift-station maintenance tasks.

When used in conjunction with an active maintenance program, Eco Lift has proven very beneficial in keeping general grease problems manageable. It keeps the grease in a liquid form, leaving the walls, pipes, and cables free of grease build up, and generally keeping the surface clear of solidified grease.

In lift-stations with major grease sources such as restaurants, it keeps the grease in a liquid form allowing the lift-station float controls to keep functioning correctly, eliminating surcharging and overflows problems that a large solidified grease mat can cause.

I have been very happy with our use of Eco Lift, and consider it one of our assets in lift-station maintenance. It helps keep maintenance tasks to a minimum and keeps the amount of time invested in each lift station to a minimum as well.
