

ENVIRO SORB HIGH TRAFFIC MAT #3874

Universal Absorbent Floor Mat

Features:

- Feet and forklifts move safely and easily over mat
- Sticks tight and flat to the floor at all times
- Durable, interlocking fiber construction
- Captures water, melting snow, dirt and grease
- Can sweep, mop or vacuum mat
- NFSI (National Floor Safety Institute) and ADA compliant for wheelchairs and walkers
- Cuts easily to create customized coverage in any area of your facility

Specifications:

- Roll Size: 36" x 50'
- Absorbency: Up to 4 gallons per roll
- Color: Gray
- Composition: Polypropylene/polyester adhesive backing
- Incinerable: Yes

Description:

The ENVIRO SORB HIGH TRAFFIC MAT is long-lasting and durable. It is comprised of two layers, the top, absorbent layer and the bottom, adhesive layer. The top layer draws liquids towards the center of the mat and holds them there. It absorbs high volumes of liquid fast. The grunge-hiding gray signifies universal sorbency for oils, coolants, solvents and water.

Applications:

- Manufacturing Plants
- Warehouses
- Processing Areas
- Assembly Lines

INSTALLATION DIRECTIONS:

Step 1: Surface Preparation: Clean and dry floor thoroughly for best grip and overall performance.

Step 2: Cut to size with a safety knife.

Step 3: Repositioning: Position the mat, smooth out and press into place.

Step 4: Trim edges. For heavy traffic areas, trim corners at 45° angles

MAINTENANCE:

Frequency of Changeouts: The HIGH TRAFFIC MAT is extremely durable and designed to last up to 12 weeks. If the mat shows obvious signs of wear or a weakened bond to the floor before the end of that time frame, it should be replaced

NOTE: Do not pick up mat to clean the floor underneath until you are ready to replace it

Drying: This mat is highly absorbent and fast drying. Absorbed water will evaporate; standard fans or floor blowers can be used for accelerated drying. For extremely wet conditions, use a wet vac or extractor to remove water.

Cleaning: The HIGH TRAFFIC MAT is low-profile and extremely durable so it can be left in place during daily cleaning. Floor scrubbers, vacuums, brooms and mops pass right over without damaging the surface of the mat. Standard floor scrubbers can be used to clean it. For best results, use low settings for water and pressure. Mat should be as dry as possible before cleaning with floor scrubbers. Tougher stains can be pretreated with standard cleaning products and agitated with a brush or scotch pad to loosen the soil.

WET SEASON/WINTER WEATHER MAINTENANCE:

Excessive rain, snow, ice, slush and salt make it hard to keep floors dry. We suggest the following best practices to help your mat keep up with the mess:

1. Use longer runs or wider widths to minimize tracking.
2. Use a wet-vac, Rug Doctor or extractor to remove excess water; the mat won't budge!
3. The mat is very low profile so mops, scrubbers and extractors pass right over.
4. Use an air blower to speed up evaporation and eliminate the need for rug changeouts.
