

ICE FIGHTER #3463

Granular Ice Melting Compound

Features:

- Leaves no oil residue, helps eliminate tracking problems
- Provides instant traction under wheels
- Packaged in a reusable 40 lb. pail and 50 lb. bag
- Accidental contact is safe on grass, shrubs, carpets, concrete and skin when used as directed
- Effective in temperatures as low as -21°F

Description:

ICE FIGHTER is an ice melting compound that consists of multi-color crystals of calcium, potassium, and sodium chlorides that are fortified with UREA MAX™. It is effective all the way down to -21°F. It is easy to apply and economical because you can see the coverage, which helps to avoid over application. ICE FIGHTER is safe for use on properly cured concrete and anywhere traction is needed to reduce risk of injury.

Applications:

- Concrete
- Loading Docks
- Sidewalks
- Steps
- Parking Lots

Product Characteristics:

Appearance:	Crystalline solid
Color:	Light green
Odor:	No data available
Boiling Point:	> 815.556°C (>1500°F)
Solubility:	Soluble
Relative Density:	≈ 2.2
Flash Point:	No data available
pH:	No data available
Storage:	Storage conditions: Keep container tightly closed. Store in a dry, cool, and well-ventilated place.
Transport Information:	
UN Number:	Not hazardous for transport
Proper Shipping Name:	Not regulated
Class:	Not regulated
Packing Group:	Not regulated

DOT Placard:

Not hazardous for transport

Directions:

For best results, use a cup, scoop, or broadcast spreader to apply. Spread product sparingly and evenly (1.5 to 3 oz. per square yard), then remove melted ice/snow or slush. Apply shortly after a snow begins to assure easy removal of snow and prevent ice build-up.

Note: If snow depth is more than 2 inches, plow or shovel first, then apply deicer to melt any remaining ice layer or hard-packed snow.

Notice: As with all deicers, use only on properly placed and cured concrete. Do not use on porous or improperly cured concrete, or concrete less than one year old. The cycle of freezing and thawing by natural weather elements can cause damage to concrete. The uses of an ice melter increase these cycles, and are factors over which we have no control. Use of deicers on porous brick, mortar joints, flagstone, and pre-cast or pre-stressed concrete is not recommended. All deicers can be harmful when applied directly to trees, shrubs, flower beds or grass. Remove any melted ice, snow, and slush from vegetation area. Ice melting agents that are applied at much greater rates than recommended may interfere with traction or footing, and may cause tracking indoors. Use of this product must be at the consumer's risk. Do not use where product might come in contact with an airplane.
