

PROPORTIONER QDV #4170

Nonproprietary Proportioning and Dispensing System

Features:

- Automatically dispenses diluted solutions at high flow or low flow rates into spray bottles, buckets and other containers
 - 4 separate eductors eliminates the possibility of chemical contamination
 - Provides dilution control for multiple products at multiple flow rates
 - Easy to maintain and repair
 - Low-cost dispensing — uses fewer components to deliver multiple product dilutions and flow rates making it a more economical choice
 - Quad diverter valve easily identifies product being dispensed to avoid errors
-

Description:

The PROPORTIONER QDV dispenser offers a unique way to dispense a wide variety of automatically diluted solutions into spray bottles, buckets and other containers. A diverter valve channels incoming water to the proper eductor, which meters the appropriate amount of chemical into the water stream using a selected metering tip. The system is configured to dispense three low flow products (such as a spray bottle) and one high flow product (such as a bucket). Backflow protection prevents chemicals from coming into contact with each other, meeting ASSE 1055-B standards. Internal manifold can be easily removed without any tools for easy repair or replacement.

Applications:

- Municipalities
- Industrial Plants
- Warehouses
- Military Facilities
- Factories
- Colleges/Universities
