## ATTENTION D.O.T DEPARTMENTS AND ASPHALT USERS

**IF YOU WORK WITH ASPHALT, YOU OWE IT TO YOURSELF TO TRY  
OUR ECO-FRIENDLY RELEASES AND DEGREASERS**

*Until recently, all that was available to help you maintain your equipment was environmentally unacceptable diesel fluid or ineffective vegetable oil or soap products.*

*Those who laid, hauled or produced asphalt were caught in the middle. No longer is this so. Both Eco Degreaser and Eco Release are 100% natural and 100% biodegradable. They are as safe as they are effective. If you are experiencing any of the following, Eco Release will solve your problems economically, effectively and allow you to do so in full compliance with all State and Federal Regulations.*

- Asphalt sticking on tailgates, dump beds, hoist areas and equipment?
- Build up of asphalt on compactor tires and drums?
- Frustration due to ineffectiveness of soap or vegetable based release agents?
- Difficulty complying with new laws and regulations designed to protect our environment?
- Problems with super sticky polymer modifiers?

# ASPHALT REMOVERS AND RELEASES

## **Eco-Release**

Eco Release provides a molecular film, a heat resistant shield that prevents hot, sticky asphalt from adhering to surfaces. Treated with Eco Release, asphalt just slides right off dump beds, rollers, spreaders, rakes, shovels and other surfaces. With a standard dilution of 1 part concentrate to 10 parts water, Eco Release is far more economical than most other agents. Because it is formulated with an all natural blend of detergents, and emulsifiers, including soybeans, oranges and corn and surfactants it conforms to the most demanding safety environmental standards. In recent test trials, participants said, "we used only about one half the amount we used previously and it did a much better job". Eco Release is ideal for use on truck beds, compactor wheels, paver boxes and other equipment.

## **Eco-Degreaser**

This safe alternative to old fashion hazardous petroleum based degreasers or harsh alkaline cleaners is all natural, fully biodegradable and fast working.

Formulated with a blend of 15% d'Limonene solvent, and 78% soybean derivatives plus natural surfactants, it is the perfect environmentally friendly companion degreaser for use with Eco Release. At a recommended dilution rate of 1 part concentrate to 20 parts water, it will effectively dissolve grease, oil, tar and heavy grime on contact.

## **Fast Clean**

Fast Clean has two functions, as an asphalt remover and a release agent. This product works better and more quickly than diesel fuel or citrus-based products for dissolving asphalt. The evaporation rate of Fast Clean is slower than diesel fuel and orange-based products so it can continue cleaning for a longer period of time. This product penetrates deep to soften more tar and leaves less redeposition.

## **Citra Solv**

This all natural degreaser is a 95% d'Limonene that will remove the most difficult stubborn asphalt on tar problems in fast order. It is fully biodegradable with a pleasant orange fragrance. Apply as is and allow to stand a minute or so then just rinse with water. Citra Solv is available in bulk or convenient aerosol.

# ASPHALT ACCESSORIES

## ***Truex Extra***

This open gear and chain drive aerosol lubricant is the perfect product to lubricate conveyor chairs and gear drives. It comes out as a very thick, dark brown grease that will cling to any surface sprayed. Truex Extra is effective from -20°F to 500°F.

## ***Protect-o-Flex***

This aerosol surface protector is ideal for use on all store equipment. It protects all metal surfaces from damage caused by rain, corrosion, oxidation and salt water. D.O.T. departments who use spreaders, snow plows, and plow blades and store them for months in between uses find this the perfect product to protect them from the deadly effects of salt, calcium chloride and the elements. This is also a great product to use on batteries to protect against leakage and corrosion. It is effective from -40°F to 210°F.

Snow plows and spreaders are crucial to winter snow and ice removal operations. Snow plows and plow blades rust and seize during summer storage creating major maintenance problems. Rust and corrosion on blades greatly reduce blade life. The corrosive effect of salt and calcium chloride create seizing on frozen chains which easily break when pulling a fully loaded spreader. All this can be prevented when stored equipment is treated with Protect-o-Flex prior to storage.

## ***Salt Off***

This industrial strength rinsing compound has been developed specifically to cut through the dulling, white chalky residue left by ice melting chemicals. Salt residue is eliminated without harming painted surfaces. This highly concentrated biodegradable compound is designed to neutralize the effects of ice melting residue diluted at the rate of 6 ounces of concentrate to one gallon of water. Safe to use on road equipment, vehicles, asphalt and concrete. Spray on, allow to penetrate then flush with clean water.
